22 MANAGEMENT VOLUME KENWOOD	OUTPUT VOLUME TRADITIONAL	OUTPUT MANAGEMENT VOLUME ONE
23 AMPLI DODGE RAM	AMPLI WAKE UP OFF	AMPLI WAKE UP ON

FUNCTIONS SETTING

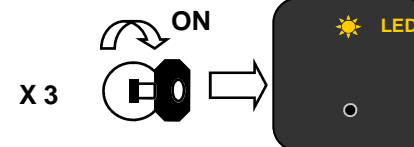

The module on default manage some functions. However sometime end user prefers other functions instead of those chosen by Paser. For this reason it was inserted a new procedure that allows to set a series of functions. First of all it is important that the unit had recognised a car canbus protocol. So the LED must be light GREEN.

Now press 3 times the module button and you will see that the LED will flash RED (UNIT), GREEN (TENS) and YELLOW (HUNDREDS) flashing.

Now turn the ignition ON of the car 3 times. The LED will flash YELLOW indicating the number of the option, followed by the RED flashes indicating the value of the option.

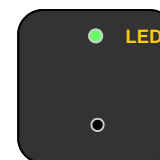

The number of flashes YELLOW represents the number of option by pressing the button briefly, the module will switch to the next to make the rounds of the options available on this version. If you want to reverse the default state of 'option, press and hold the button until the LED after a short shutdown, back green.
